

Task: Document Q&A System

Objective

Build a system where a user can upload a document (PDF) and ask questions about its content.

The system should return answers based only on the information present in the uploaded document.

Requirements

- User should be able to upload a PDF document
 - User should be able to ask questions about the document
 - The system should return relevant answers based on the document content
-

Constraints

- Do not use external APIs (OpenAI, etc.)
 - The solution should run locally
 - You may use open-source libraries and models
-

Deliverables

- Source code (GitHub repository)
 - README with setup steps
 - Short demo (video or screenshots)
-

Evaluation Criteria

- Relevance and correctness of answers
 - Approach used to solve the problem
 - Code quality and structure
-

Note

You are free to design the system as you see fit.
Focus on clarity of approach and reasoning.
